Comments: CEASE AND DESIST. The project area is too big and environmentally impactful for solely an Environmental Assessment (EA). The agency MUST conduct an Environmental Impact Statement (EIS) before continuing forward. We (the state) have already lost so much! Go slowly before making such a blanket shift like this.

This project treatment areas contain multiple Tier 1 key watersheds and Critical Habitat for threatened and endangered salmon. It will potentially impact more than 239 sub-watersheds with increased sediment pollution, including 30 municipal watersheds.
