Title:

Comments: My comments are in relation to how this proposed project will effect California's Northern Zone.

This prospective project must include a full and complete Environmental Impact Statement encompassing all of the real and likely results of this unprecedented timber sale.

It must also include the impacts on Global Climate Change in regards to the lessened capacity of these forestlands

to sequester CO<sub>2</sub> which contributes significantly to the current Global Climate Change Crises.

The project treatment areas contain multiple Tier 1 key watersheds and Critical Habitat for threatened and endangered

salmon. It will impact more than 239 sub-watersheds with increased sediment pollution, including in 30 municipal watersheds.

The project will impact nearly every Northern Spotted Owl Critical Habitat Unit in Northern California and the Coastal Inland Critical

Habitat of the Marbled Murrelet. This proposed project would allow commercial logging within Late Successional Reserves and

Riparian Reserves.

Marbled Murrelet

<https://www.audubon.org/field-guide/bird/marbled-murrelet>

Lastly this project should focus on analysis of high-use roads and other roads that serve a critical purpose, along with with a review of

the existing road network to see which roads are no longer necessary.
