Comments: I am greatly concerned about the impending destruction of the North Zone forest habitats due to a lack of a vigorous environmental impact assessment. This area is a tier 1 watershed and Critical habitat of the threatened and endangered salmon. With the advent of salvage logging (bringing new swaths of treeless areas, new roads, and landings for log piles), where will the endangered wildlife go???? I call on you to revisit this plan and rectify these horrors about to happen in our beautiful forests.

Thank you for your consideration.
