Comments: It would be an absolute disgrace and act of disrespect to permit logging on such a beautiful natural area that provides habitat, safety and food sources for innumerable species of plants and animals. The world's natural areas are under attack, by humans and by the threat of climate change. Do better. The people of New Hampshire and people from all over the country come to the northeast to cherish the beauty of the Whites. Indigenous populations have cared for and lived with and for the land for centuries. We do not need to log this beautiful land and feed into a system of the exploitation of natural resources.
