Comments: Politics will not remove Wild Fires. We can reduce fires in area size to be much smaller if we plan ahead of these dry conditions. The question is once a fire starts in our forest, can it be managed? Because of politics, its difficult Log or reduce fuels etc. I propose to clear all fuels along side all main roads 50 to 100 yards along side these roads which will become a fire line when that fire starts. Sounds far fetched! Examine the trail Crk fire of 2021. Well after the fire started a fire line was made starting at the Jct of 93 and 43 clearing fuel 100 yards from the road to Trail Crk road at a tremendous cost under emergency conditions with it serving no purpose for this fire. This practice has been used again and again. So why not plan ahead? Reduce the fuels now or let it all burn.Its a win, win.
