Title:

Comments: In regards to the effort for the White Pine Removal Project #62011, I would support any project that creates a healthy forest habitat for Ruffed Grouse, American woodcock and other wildlife. I hope this project will create, enhance and protect early successional forest habitat. Early successional forest habitat also benefits other species such as deer, turkeys and over forty species of song birds that need early successional forest for survival.

Thank you for this opportunity to respond.
