Comments: I am writing this comment today because I strongly object to our publicly owned, publicly supported national lands to be used as a garbage dump for a private company. In addition, this particular industry has a long history of abusing public lands and indeed, the planet , in its unquenchable quest for resources and profits. In these dark days of the an ongoing climate disaster that includes overall habitat destruction, along with this industry's atrocious record, I find it unconscionable that this company is asking for more land to dump its tailings. When do we, the public, have the right and the power to safeguard the lands that are legally ours? I say, right now is the time and this is the right project to draw a line in the Earth . I SAY NO. Stop this NOW.
