Comments: The concern I have with this proposal is that there will be commercial logging in this National Forest. Sometimes commercial logging companies have been known to pass their own agendas of commercial for-profit logging under the guise of fire suppression. Two problems often result from this:

1- National Forests are increasingly seen as a resource for logging and livestock grazing more than as a resource for the vast majority of visitors to our National Forests who do not want to see "thinned" forests or clearcuts.

2-Commercial logging itself has been known to cause wildfires during summer months but even more frequently, it creates flooding conditions come rainy season with mudslides.

I do not recommend the continued allowance of commercial logging in our National Forests.
