Comments:

1. East of the Kelley Trail, in Unit 37 on Map 2 Ferncroft, on the east side of Kelley Brook the land is sloped very steeply for an extended distance away from the brook. What precautions will be taken to prevent erosion into Kelley Brook caused by machinery incursion and tree removal, both during and after logging in the area?

2. Based on tracks, sightings and other signs, it seems that the Ferncroft area has a significant black bear population. Given that the plan for the area includes logging in both Fall and Winter, how will bear dens be located and protected during logging, in order to prevent their disturbance and a subsequent increase in winter time mortality?
