Comments: I strongly disagree with the USFS determination of FONSI for the Jenny Gulch mining. The noise and physical disruption alone will impact the wildlife in this area: elk, goshawks, smooth green snakes and black backed woodpeckers.

For the human factor, we have finally gotten the gate across the closed trail off Jenny Gulch where ATVs and dirt bikes have disrupted us since 2016 and now you want to let mining come in with trucks and equipment? When it is stated that it would have the sound level of a running refrigerator? That does not pass the smell test one iota!

No Significant Impact. That tells me that the habitat, the forest, my water and the people in my neighborhood are not significant. But we are.

Stop this madness.
