Title:

Comments: Rough-cutting and clear-cutting our arboreal forests, specifically, forests in Canada and SouthEast Alaska (as in the global climate controlling and carbon absorbing Old Growth of the Tsongas National Forest), simply because these globally available virgin-timber resources have the cheapest overhead to paper producers profits; but in today's climate confused, intemperate (or maybe "temperamental") imbalanced global weather catastrophe, that real cost is assumed by you and your children (held on retainer until Mother Nature is granted citizen's Rights and can demand proper consideration) and it will have a pay-out of irreparable harm...for ages to come!

These old-growth forests are an established (until destroyed by fire, flood, hurricane, tsunami, or landslide - all disasters wrought by a confused, fossil-burning, ecosphere) carbon-sink the anchor trees of which have been keeping our atmosphere oxygenated and rivers freshwater pure for centuries.

Your mission has a governmental duty to protect these resources from the ravages of unfettered capitalism, and I expect your Department to enforce Executive Order 14072 under the Forest Service #NP-3239.
