Title:

Comments: I have previously entered comments opposed to this project and I object to the current action. The likely negative effects on ground and surface water in the area; the noise, dust, sedimentation, and access issues in a popular recreation zone; the environmental impact, which is clearly NOT minimal; the lax reporting requirements; the massive public opposition; and the claims that this project is "not about mining"; all of which were included in my previous comments, make clear that this is a highly undesirable project. As one who is likely to be affected directly, I most certainly object.
