Title:

Comments: I am not a scientist. But I did learn in school that trees make a lot of the oxygen we breathe. And probably, the bigger, older trees create more oxygen. And the bigger and older the tree is, the more stunning. And the more beautiful the tree is, the more it requires me to take an even deeper breath to take in all its glory. I am not a scientist, but my hypotheses is that we all need big, old trees.
