Comments: While I agree that our forest canopy is crowded and harvesting is necessary, the forest service needs to establish a prescribed fire frequency on all fire prone landscapes before any harvesting happens.

Harvesting right now is not even possible all our mills are at capacity from salvage logging due to catastrophic wildfire.

Even entertaining the idea of harvesting is crazy, especially before the hazardous fuel situation from fire exclusion is resolved with the reintroduction of prescribed fire - A Critical Ecological Process.

Change your priorities to saving the forest that remains with prescribed fire before there are no trees left due to catastrophic fire and cataclysmic deforestation.
