Comments: Trees are aquifers, they hold water and moisture in the soil. When you remove the trees through clear cuts, you start the process of desertification, damage to the habitat and infrastructure of a healthy forest.

Timber industries need to STOP this practice of clear cutting and removing mature and old growth trees. Forest management needs to start by remove the clustered trees that encourage a forest fire of greater extreme.

It's time timber workers take back the forests and protect the less than 2% of old growth trees left. The practice of selling OUR trees to the highest offshore bidders needs to end!

Old growth these trees are older than Jesus Christ and the wood they nailed him on. They will never be replaced in our children's, children's lifetime
