Comments: I share President Biden's concern for Climate Change. I am also concerned about lose of the Amazon Forest and world wide Forest Fires. To add to this my own US Forest Service is still allowing Private Timber Company to timber my National Forests. Timber Companies need to be buying trees from Private Tree Farm Growers. I realize the US Forest Service gives Public Trees away for the cost of building un-needed roads to get to them, but this is wrong also. I understand tree rotation. As young trees grow into medium age trees, the Forest Service looks for ways to get rid of Old Trees. IN this new age of 8 1/2 Billion people and their need to breath, Old trees produce a lot more oxygen than new tree sprouts. Plant sprouts after Forest Fires and stop timbering forest. P&G can buy Charmin trees from Private Growers.
