Title:

Comments: A Potential Public Land as an Eglon Community Forest

VISION

An effort to create an Old Growth Community Forest and Sanctuary. The 640 acre Eglon Forest will serve all of Washington State and beyond by creating a destination forest to be visited. To be community governed.

PRINCIPLES

To create the Old Growth Forest and Sanctuary and have a healthy relationship with the forest the community will follow these 5 principles.

1. Will be forested by a sustainable forestry plan. (the United Nations Sustainable Forestry plan)
2. Will recognize a joint-venture between Mother Nature and the local community.
3. Will enhance the ecosystem generated by Nature.
4. Must create public access for trails, for education and for recreation.
5. Will respect all life found living in the forest.

All 5 principles must be applied to every project being considered for the Eglon Community Forest.

The creation of an Old Growth Community Forest and Sanctuary is a good investment for a Northwest way of life, for Nature and for our economy by having a destination forest.

All projects and harvesting are to be done locally.
