Title:

Comments: My family and I love to hike and camp in old growth forest locations. These forests provide excellent habitat for many, sometimes endangered species. Also, these forests are a critical part of the solution to mitigate climate change impacts by sequestering significant quantities of CO2.

Please help to identify and protect as much of our country's old growth forests for our children/grandchildren and other species to enjoy and to help protect our planet's health.

Thank you for your support.

Paul Schlegelmann
