Title:

Comments: Mature and old growth trees are at risk for commercial logging. I use the forest service and BLM to act now to protect these trees and adopt climate smart forestry into land management planning. I urge leadership in Forest Service to meaningfully incorporate the Climate Vulnerability Assessments into planning documents in order to cumulatively and systematically analyze the impacts to landscapes given regionally specific climate predictions!

We know under these predictions Federal Forest lands are critical in providing living climate buffers with clean air, drinking water, flood and erosion controls and fish and wildlife habitat.

Please! Sincerely, Doug Kacir. Hiker, fisherman, kayaker OG tree lover.
