Comments: Jenny Gulch Gold Exploration Drilling Project Objection ---
Wow. The amount of time, effort, money, detail that went into the Draft FONSI on the F3 / Jenny Gulch Gold Exploration Drilling Project is extremely impressive to me. However, WE ALL KNOW what comes next… another report or two, another finding or two, then mining... even if 3, 5, 8, 10 years later. Then the dangerous and deadly mess on our land, water, wildlife, and way of life. I wonder what the tourists will think of the foul water after a "no significant impact" mining project occurs? I wonder if we will have a water treatment plant that can process that mess downstream? Fact is - we can't drink gold. Historically, exploratory actions and mining have been historically BAD for water, wildlife here. I vehemently oppose exploratory drilling and mining! The out-of-state and out-of-country companies come into our area, take the resources and leave a mess for the rest of us. Stop this in its tracks, if at all in your power. And for the love of all things Holy! Can we move into some sustainable, green energy solutions YET?! Please?! Good grief!
