Comments: We are moving ever so close to not being able to come back from the ledge of the negative effects of carbon emissions. President Biden, you pledged in your campaign efforts to help the United States lead the way in reducing carbon emissions. I cast my vote for you because I believed you. I am sad to say I have yet to see this promise truly come to fruition. We need old growth forests to maintain the stability of their present ecosystems; to continue to capture carbon in a natural and free manner (as opposed to the proposed thousands of miles of carbon pipelines that will not truly solve the problem of carbon emissions); and we need NOT to have the forests destroyed with their process of destruction releasing further carbon emissions into our already fragile atmosphere.

PLEASE PROTECT THE OLD GROWTH FORESTS!!!!!! Our future depends on this protection and the protection of other fragile ecosystems.
