Comments: As a tax paying voting citizen, I urge you to conduct a comprehensive inventory of mature and old-growth piñon pine and juniper forests on the Colorado Plateau during this first stage of implementing the president's executive order. Especially in Utah.

Forest containing trees that can grow for 600-1600 years deserve protecting and should not be destroyed for the sake of cattle grazing and the extraction industries.

These lands are too important the U.S. and the world's future to trust to corrupt, paid for, state politicians.
