Comments: This decade is our last chance to stop the climate emergency before we hit tipping points of no return. Our CO2 levels of 441 are unprecedented and are heading to an unlivable future of temps greater than 1.5 degrees C. We must act now for future generations!

Old growth forests need identification and protection. NOT LOGGING!

There are so many reasons, such as CO2 absorption, biodiversity and species protections, water quality, flood prevention, birds, amphibians, and on and on.

There are so few old growth forests left. Please take this situation we are now in seriously and protect these forests. For your grandchildren.

Thank you.
