First name: Susan

Last name: Prindle

Organization:

Title:

Comments: It is in our best interest to preserve all the old and mature trees in Black Ram and other public lands. These huge trees store more carbon than younger trees, continue to store more carbon as they age and are worth much more left standing. This is our best hope to slow down climate change and they must be protected.

Please put the matter of climate change at the top of your list when you consider cutting down these mature trees.

Thank you

Susan Prindle
