Comments: So excited to hear that you all may be preserving old growth forests as part of the climate change initiatives- Here in Kentucky's Daniel Boone National Forest, there are an estimated 430,000 acres over 80 years old, comprising about 60% of the forest. About 100,000 acres of mature and old-growth forests have been cut since 1980; making up about 15% of the Daniel Boone National Forest. We must preserve what we have left! Here's to America preserving its beauty, diversity, and resources. Were a smart, able people that can find what natural resources we need from such places in other ways.
