Comments: The need has never been greater to protect old growth forests! In an era of climate change It makes no sense to exploit these last remaining areas of diversity. If we can not get the pulp / wood we need from sustainable forestry, then cutting old growth forests is not going to save us either. Please stop the short term profit machine from destroying our last remaining old growth forests. And let's make sure it's permanent this time and not left to politicians with an agenda.

Thank you
