Comments: To the Biden Administration and BLM:

Climate change, with its adverse consequences, is no longer a future possibility. It is happening now and it is imperative that government take every possible action to halt it. One is to ensure that old growth forests, that pull large quantities of carbon (as CO₂) out of the air, are protected and preserved. So, I'm asking that you do a comprehensive study of the old growth Juniper and Pinon Pine forests on the Colorado Plateau and other Federal lands.

Thank you.
