Comments: 80 years old growth is very young old growth and NOT suitable for spotted owls. You need trees at least 3' DBH or better, 4-6' diameter plus 3-4 snags same sizes per acre. My district USFS ranger said he knew better in 1981 and we had 20 pairs. Now we MIGHT have two!

The USFS here made a business of logging spotted owl groves and yelled at the women biologists, "Wal, they can just go somewhere else!" they did and a few simply saw thru the hypocrisy of the right-wing ranger and quit, some almost in tears. Want some names?

So much for federal honesty. It's the money.
