Comments: I support the recommendations of the Friends of Douglas-fir National Monument to support President Biden's directive to define inventory old growth on national forest lands.

In view of the dramatic effects of climate change, preserving forests everywhere should be the world's priority.

I urge adoption of the criteria listed by the Friends' group to define mature and old growth, and the suggestion that salvage logging not be allowed after wildfires so the landscape can recover naturally, which it will much more quickly if left alone.

Thank you for accepting comments on this.
