Comments: This development to Holland Lake Lodge would negatively impact the lake and the land around the lake. There is not enough space for this to be developed into a resort destination. When you put too many people in a space like this there is destruction on the land, water system, and trails. Not only is the land negatively impacted but the wildlife is also negatively impacted by adding all the lodging. Holland lake has always been a place of relaxation, by making this a resort destination there will be more pollution, noise, light, water, and litter. Let's think of the environmental impact this will have on the land around Holland lake.
