Title:

Comments: An expansion of this size will have a negative impact on the surrounding area and the services required to support this are not currently available. Given the state of change in our environment is it wise to look at this kind of development this point in time? Our resources are fragile and inconsistent. The expectations of visitors to this level of accommodation comes with high demands by visitors that may not be able to be comfortably met. Please consider the land use issues from a long term view. There are so many unintended consequences we are living, when we develop and exploit the land and lakes in our area. Please think of the most important issues water quality and over use of limited open space are more important than the profits of a large commercial site that is only used a few months of the year. Some places are already at the capacity of use in terms of the natural surroundings they are a part of. Please do not recommend this expansion.
