Comments: I recommend the USFS, start using No Growth Tools and begin removing structures, closing roads, and creating more wilderness.

Managers seem to be inclined to push commercialism, development, and extraction, when they should be working as hard as possible to secure more roadless areas, create more wilderness, and protect more wildlife, and reintroduce predators.

The writing is on the wall and we should not delay and end grazing allotments. Cattle grazing will be a thing of the past, and we will be eating plant based, and lab grown meats, and hopefully more wild game after we get the cattle off the land.

Stop suppressing wildfire and thinning, logging. Let it burn and use prescribed fire during the late Fall. We should stop firefighting since it is so dangerous and really not as effective as weather in putting out fire.
