Title:

Comments: To whom,

The use of a CE is inadequate for the scope of this development project, there will be effects to bull trout and loss of public access to shorelines, wastewater problems and not a fire safe project with only one ingress/egress to the main road and a fire safe shelter is needed to house potentially trapped visitors. How will loss of public access be compensated for on a finite shoreline?

An EA or EIS is needed.

Thank you,

Paul Sieracki
