Comments: This project requires and Environmental Impact Statement. Public comment and opinion very much needs to be taken into account on this factor. Montana is precious with its resources and beauty. We need to protect it. This is an area that is very much enjoyed and booked all summer long for summer recreational activities. How will this impact the environment? How will this impact the resources that are currently there and available? We don't want to lose any of the campsites and recreational opportunities available to the public. Tiny cabins and camping opportunities are what make Montana, Montana. Resorts are in few places here and should be kept that way.
