Comments: The environmental impacts of a large scale resort would be detrimental to the area, both to the wildlife, as well as the local residents. The increased traffic (roadways and trails), noise, trash, sewage, etc will not only destroy this beautiful area, but it will forever scar the landscape. If the FS allows fast tracking of this plan without a proper environmental impact assessment, it will be appalling to say the least. Public lands are just that, Public, and the people should have a say in how they are cared for. As supposed stewards of these lands, it disgusts me that a proposal to this extent is even being entertained. All for the benefit and enjoyment of a select number of ultra-wealthy visitors this type of resort will cater to. Please consider the input from the public before hastily approving this venture. Actually care about the land as your slogan insists, instead of only thinking about lining your pockets.
