Comments: The Holland Lake Lodge Master Development Plan was not made publicly available on the Flathead's web site until September 6. The public needs more time to review this 36-page document and the Forest Service's 16-page scoping document. We need adequate time, public involvement and environmental review before this mega-expansion gets started. Additionally this project should not be categorically excluded because its scope of changes. A development this large needs an environmental impact statement!!! Historically other large projects such as this needed an EIS; this is no different. A full assessment of the potential impacts of this mega-development on this historic, rustic area and its natural ecosystems needs to be undertaken.
