Title:

Comments: This project is not a good idea mostly from the angle of increasing wildland/urban interface issues for wildland firefighters. The Seely/Swan Valley is a tinder box just waiting to burn up. I worked forty-six fire seasons for the US Forest Service with twenty of those seasons as a Missoula Smokejumper. Adding more wildland/urban interface challenges put firefighters at great risk. If...you approve this project it should require fire-resistant materials, defensible space, and Firewise compliance.
