Comments: I oppose large-scale development in Flathead National Forest on Holland Lake. Plans for buildings, timber removal and lakeside development will cause irreparable harm to the environment of the lake and forest area, and should be subject to an environmental impact assessment. The development would destroy the public's quiet use of the area, which is why people love to come to it as it currently exists. Small-scale improvements of this existing lodge should be on a scale to enhance, not destroy, the lake and its environs. This application must be denied.
