Comments: This is a disgrace! Using public land to to benefit a large corporation and turn Montana into a dump like California. Tearing down full grown trees and digging up land to lay fiber optics is going to disrupt the natural habitat of many animals. With so many new builds and in turn people coming to access the lake it is bound to bring tons of trash and pollution with it. I question how something like this could come about and get pushed though with little to no public information. How many people are getting paid off?
