Comments: Hello,

I am appalled by how US Forest Service has handled this improvement project.

As a person who is not a resident of MT but spends between 50 to 60 days a year vacationing in the Bob Marshall / Glacier areas including other great areas of MT I am heart broken to learn of this improvement project. The reason I spend so much time in MT is because of the natural wildness of the area. I do not want to see anymore big resorts. Just like what is going on around Big Sky...

Here are my questions:

1. What happened to preserving nature?
2. Where are the full environmental study document?
3. The full impacts to the surrounding areas / communities?
4. The appearance of this deal with POWDR appears to be questionable, why did it so long to get public input when it was known back in April?
5. Why is it more important to accommodate POWDR (over many months) versus taking into account public input (3 weeks)?

Just heartbroken that the US Forest Service would do such a thing.

Tom
