Comments: Hello,

I am appalled by how US Forest Service has handled this improvement project.

As a person who a person who is not a resident of MT but spends between 50 to 60 days a year vacationing in the Bob Marshall / Glacier areas including other great areas of MT I am heart broken to learn of this improvement project. The reason I spend so much time in MT is because of the natural wildness of the area. I do not want to see anymore big resorts. Just like what is going on around Big Sky...

Here are my questions:

- 1. What happened to preserving nature?
- 2. Where are the full environmental study document?
- 3. The full impacts to the surrounding areas / communities?
- 4. The appearance of this deal with POWDR appears to be questionable, why did it so long to get public input when it was known back in April?
- 5. Why is it more important to accommodate POWDR (over many months)versus taking into account public input (3 weeks)?

Just heartbroken that the US Forest Service would do such a thing.

Tom
