Comments: To Whom it May Concern,

I was stunned to learn about this project. Although I reside in Carbon County, it saddens me to see that a corporation would be allowed to come in and destroy an intact forested area without much consideration on the impact it may have on the flora/fauna in the area. The lack of sufficient time for commenting and lack of publicizing this makes it feel like there is financial gains to be made by someone NOT part of the corporation. Let's not replicate government corruption as seen in many other states here in Montana.

Perhaps a modification of structures being built and the locations in which they are being built could create less impact on the area? For instance, have buildings nestled in between trees rather than create a concrete jungle void of nature and trees within the resort boundaries. It could create a more esthetic environment for the tourism but also cause less impact on the visuals for the native Montanans.

Thank you for your time.
