Comments: First of all, who owns this land? I know it is on Forest Service property which is a public domain. Nothing can or should be done with this land without the public's approval. So how is this even being proposed as it appears that the public has not been apart of this discussion until just now? What role does the Forest Service have in all this?

President Teddy Roosevelt established the Forest Service in 1905 for the sole purpose of allowing all Americans the opportunity to experience the wonders of the outdoors which President Roosevelt so loved. He did this to protect wildlife and public lands.

Have you seen and experienced the magnificent area called Holland Lake? Well, my family and I have on many occasions. It is a gateway to millions of acres of wilderness called the Bob Marshall. This whole area is pristine and should never be allowed further development and is should stay the way it has been for over 100 years. We owe this to the next generation and the generations after that for perpetuity.

Thank you.
