Comments: Why such a short comment period of 21 days for such an impactful alteration of a useful and beautiful Montana feature? Where is the environmental impact of the project, which will be significant, for concerned forest users to see? The destruction of healthy, mature trees does not seem wise on such a site where the open spaces and majestic trees are part and parcel to the innate natural beauty of the site. It is patently unfair to the citizens who enjoy this historic part of our Forest to be rushed into a short comment period without adequate notice when the project has been planned for a long time. It is obvious to me and will be to many other Forest lovers that this project is driven by money and greed and you are trying to sneak the project through approval before many people find out about it.
