Comments: I understand the economic benefit that would be produced from this proposed project. I do feel that the proper environmental study needs to take place on this forest service property to quantify the effect that the removal of trees and construction projects will have on this area. This is a pristine area that is enjoyed by many outdoor enthusiasts because of its primitive environment. This is a very beautiful lake and the proposed project will drastically change the landscape that people have enjoyed for decades. I do feel the input from the public should be a factor as to whether this project is approved by the forest service.
