Title:

Comments: I would beg that an environmental impact review be completed prior to this project being approved and allowed to move forward. This pristine environment would be irreparably damaged by the infrastructure required to support a development of the proposed size. Water quality and resources, wildlife, and air quality can not escape damaging impact with the proposed changes to the existing structures. The mature trees provide land stability and cooling while sheltering the wildlife that provide so much enjoyment to those able to visit this public forest.

Please do not allow irreparable damage to be done to this public forest. Thank you.
