Title:

Comments: Technically this project may only require a CE it deserves much further analysis than what will occur as proposed. Particularly the possible impacts to water quality with the increase in visitation to the area with improvements. I saw no reference to how this project will deal with the increase sewage that will result from more people? What is the current disposal system, is it working, how long is the projected life expectancy of the current system and how will increases in use affect the current system?
