Comments: The environmentally fragile lands that surround Holland Lake will be significantly and irreparably changed if a project of this magnitude is allowed to go forward. At the present time numerous small-scale recreation opportunities exist around the lake shore that meet the needs of camping, hiking, kayaking and lodging interests. I have never felt that the needs of these various stake holders have not been met by the current Lodge facilities. In addition the proposed project is on a scale that would likely have a negative impact on the current wildlife population which is a major reason current users of the Holland Lake area come there to recreate. Please consider the need to add a mega-development to a region that already offers the best set of experiences that the state of Montana and the USFS can offer.
