Title:

Comments: concept is without consideration of any aspects of the environment, will require an EIS before approval. infrastructure such as electric, roads etc., montana taxpayers will end up funding. put out a survey and find out how many taxpayers are willing. selling out the state to moneyed out of state interests is not in keeping with the fact that to live in montana, you take a hit financially, but have a good quality of life(if you can survive). just say NO to those who would destroy what montana is about.
