Comments: The Holland Lake Lodge will be negatively impacted by developing the pristine area within the NFS-NPS control area.

The increased erosion and runoff during construction will pollute the water and interfere natural habits. Exhaust from construction equipment will pollute the air and natural vegetation.

We've seen this type of destructive activity in South Dakota's Black Hills area.

The results of vehicle pollution in National Parks has required Shuttle services to be mandated.

Please deny any project that will endanger another valuable wilderness area.
